

# Herbicide Application Bulletin

## **Kerb Program for Poa Control on Greens, Tees, Fairways and Roughs<sup>1</sup>**

### Spray Schedule

Apply Kerb 50 WSP at the rate of 1# to 2 # ( 1/2# to 1# AI) per acre on greens and tees. Use the higher rate if seed heads have formed.

Spray at 50 gals water/acre.

Rate can be increased to 3# (1.5# AI) on fairways and roughs. However, Kerb can cause problems to the turf if frequent applications are made. It is safer to use a lighter rate followed by another application 3 weeks later.

Kerb works through root absorption. It is not necessary to water in after application, the nightly irrigation will activate the product.
